

LAKELAND INDUSTRIES ASIA PACIFIC

# Product ChemMAX 2 Extremely soft fabric makes a comfortable mid-range chemical suit. Saranex® 3P barrier film – provides protection against many chemicals that usually demand more expensive garments. Fabric & weight Saranex barrier film laminated to a bicomponent spunbond. 143gsm. Style \*(see overleaf) CT2S428 Seam Type Stitched and PE taped. Colour White

| Toluene  | 108-88-3  | Imm / Class 0     |  |

Breakthrough times are a reflection controlled lab tests measuring "Normalised Breakthrough" as the time to reach a permeation rate of 1.0µg/min/cm². This does not imply "no breakthrough" and is not intended to indicate any duration of "safe-use" in any specific application. It is always the users' final responsibility to ensure a garment is suitable for the application.

### **Key Features**

- Light, soft and flexible fabric
- Dow Saranex 23P barrier film tried and trusted chemical barrier at competitive price
- Stitched and taped seams for strong and impervious seam
- Lakeland Double zip / storm flap for secure front fastening
- Cushioned knee-pads
- Lakeland Super-B style pattern 3 piece hood / inset sleeve / diamond crotch gusset

### **Suggested Applications**

- Higher hazard chemical protection
- Petrochemical and refining applications
- · Chemical handling and distribution
- Chemical clean-ups and spill management
- Contaminated land clearance
- Oil-spill clean-ups

# **Technical Data Sheet**

# Other Information

# Lakeland Super-B Style Pattern – ergonomic design for freedom of movement, comfort and durability

All Lakeland coveralls are constructed using Lakeland's "Super-B" style pattern. Using the company's global knowledge and experience of protective clothing this takes European CE and North American ANSI styles to produce a garment design which combines the best elements of both to produce a garment which is generous in size yet better fitting and allows greater freedom of movement.

The Super-B style consists of 3 key elements:-

### Three Piece Hood

Many cheaper garments feature a 2 piece hood. Lakeland's 3-piece hood creates a 3D profile which fits the head better and allows greater freedom of movement. It also fits better with face masks when worn.

# Most Europ

Most European styles use a "bat-wing" style (red line) in which the under-arm reaches down to the waist. The argument is that it creates more room in the chest. However, THIS CLEARLY RESTRICTS MOVEMENT WHEN THE USERS REACHES ABOVE HIS HEAD, PLACING STRESS ON THE CROTCH AREA.

However, Lakeland use an inset sleeve (blue line) which follows the contours of the body and allows much greater freedom of movement

### Two-piece diamond crotch gusset

Commonly garments have four seams – two body and two leg – that meet at one point in the crotch. This is a key weak point and often results in tearing and rip-outs. Lakeland inserts a two-piece diamond shaped crotch that spreads the stress and creates a more 3D fitting shape, improving wearer movement, comfort and enhancing coverall durability

The unique combination of three key elements of the Super-B style coverall makes Lakeland garments the best designed available

# **Other Design Features**

All Lakeland chemical suits (TomteX & ChemMAX) feature a front fastening consisting of a double zip with storm flaps. This ensures both full protection against sprays to the front of the garment and easy donning and doffing.

In addition ChemMAX garments (Except ChemMAX 4) feature wide double layer knee-pads to enhance comfort, durability and safety.

# Sizing

|                     | Chest           |
|---------------------|-----------------|
|                     | 40              |
| $ \langle \rangle $ | 40              |
| 4/                  | 1               |
| 1                   | Body            |
|                     | 从Body<br>Height |

| Size | Body Height | Chest     |
|------|-------------|-----------|
| S    | 164-170cm   | 84-92cm   |
| М    | 170-176cm   | 92-100cm  |
| L    | 176-182cm   | 100-108cm |
| XL   | 182-188cm   | 108-116cm |
| XXL  | 189-194cm   | 116-124cm |
| XXXL | 194-200cm   | 124-132cm |

### **Seams**

Lakeland garments use 3 types of seams:-

Serged or Stitched Safegard GP MicroMAX NS

Bound
Safegard EP
Safegard 76 / Diamant
MicroMAX
Cool Suit

Stitched & Taped MicroMAX TS Tomtex ChemMAX

# Storage, Shelf-life and Disposal

### **Storage**

Lakeland garments can be stored in normal storage areas and require no special condition. Keep in cool, dry areas where possible and away from direct heat and sunlight

### Shelf-Life

Lakeland coveralls are primarily manufactured from inert polymers (usually polypropylene and/ or polypropylene which should normally degrade over longer periods in excess of 10 years. Garments are supplied in sealed bags and so a shelf life of ten years or more should be reasonable under normal conditions. However, we recommend that after 5 years Type 3 and 4 chemical suits should be disposed of and replaced or used for training only. Some discoloration of especially white fabrics may occur over time though this will not affect performance. In any circumstances it is the users' responsibility to check garments for damage tears or wear before use

### Disposal

Polymers used in Lakeland garments are generally inert, non-harmful and non-toxic and can be disposed of by incineration or to landfill according to local regulations. However, any garments contaminated with chemicals must be disposed of according to the requirements of the chemical or cleaned before disposal
